

# New MISO requirements for Network/Commercial models

- The MISO Network model built 4 times a year. Model updates submitted every 90 days. (*March, June, September, December*)
- Model updates must completely reflect any new configuration that is scheduled to be placed in-service during the time each of the respective models represent.  
(Fall model updates must contain any projects anticipated to be going in service from September 1<sup>st</sup> thru November 31<sup>st</sup>).
- ATC will be providing, to each Market Participant, a copy of the changes to the Network Model we will be submitting by the June 24<sup>th</sup> deadline. Market Participants will have approximately one week to review the updates.
- Any generator or load related update will require an Attachment B to be filled out by the Market Participant.

# New MISO requirements for Network/Commercial models

- MISO plans to automate the generation of Attachment B forms at some point.
- Market Participants and ATC will need to coordinate the addition of generators and load points.
- The MISO presentation on June 3<sup>rd</sup> will further address this and other issues related to submitting updates to the Network and Commercial models – I encourage all customers to participate!
