

STRATEGIC ENGINEERING EXPERIENCE & DEVELOPMENT (SEED)

Development Experience Map - *An Engineering Journey*

● **INTRODUCTIONS**

● **JOB SHADOWING/ CROSS-TRAINING**

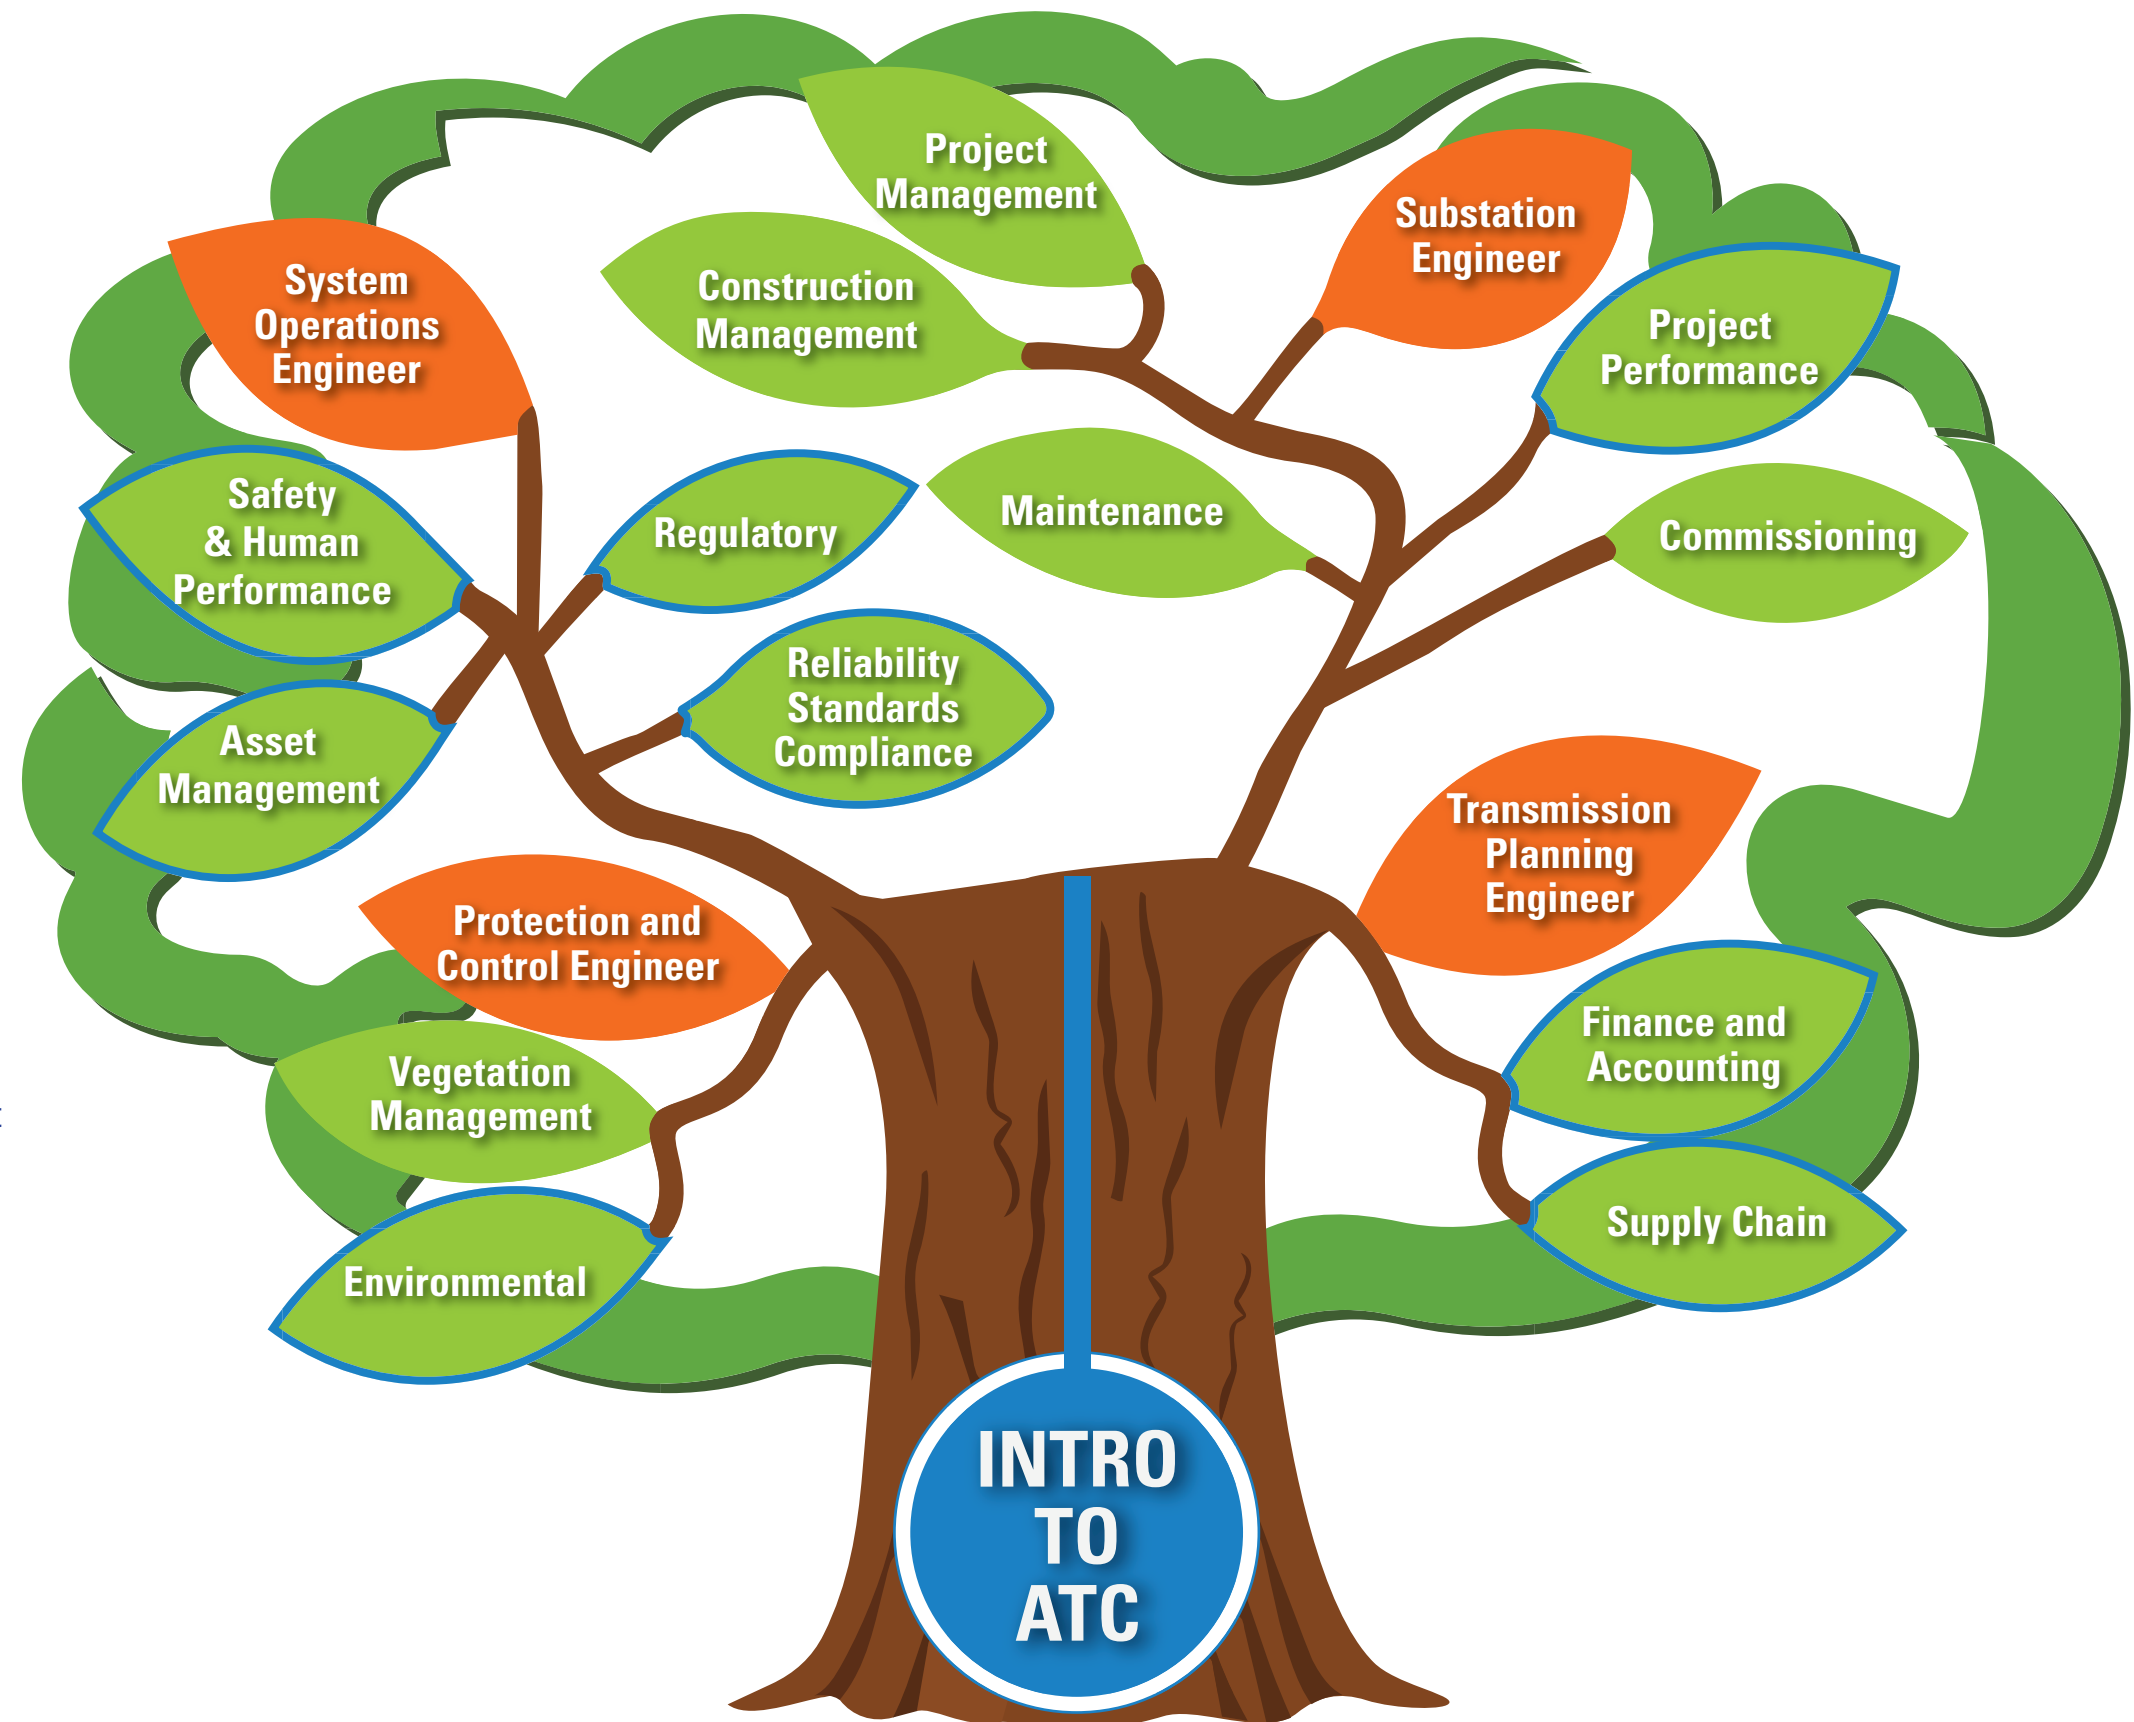

● **CORE WORK EXPERIENCE**

PROGRAM OBJECTIVE:

The SEED program is an introductory program to allow engineering graduates an opportunity to learn more about the various engineering jobs in the company and find a path that suits them and ATC. The SEED program increases the ATC talent pool and supports our Core Engineering Departments.

PROGRAM OUTCOME:

Participants in the SEED program complete training, education, and on-the-job assignments in different functional areas to gain awareness, understanding, and experience in the electrical engineering roles within ATC. Upon successful completion of the program, participants transition to a role at ATC based on their skills, desires and needs of the company.

Department assignment may vary to accommodate rotation of SEED engineers through the program.
